
Negotiation Engine — Every Journey, Both Sides

Every scenario in the negotiation engine, photographed on the live site after the 12 September rebuild — what the guest sees and what the host sees, side by side.

Aajoo Homes — Negotiation engine

Prepared 12 September 2026 by the Zyphex Tech development team

Every screen photographed on www.aajoohomes.com, driving the live flow with a real guest and a real host account

This document walks the negotiation engine as it runs today on www.aajoohomes.com, after the rebuild of **12 September 2026**. Every screen in it is a photograph of the live site, taken while driving the real flow with a real guest account and a real host account. Nothing here is a mock-up.

It replaces the 9 September edition. Section 15 lists what changed and why, so the two can be read against each other.

Each scenario shows **what the guest sees** and, where a host is involved, **what the host sees at the same moment**.

1. The three prices

Every listing carries three prices. The host sets them once, in Step 4 of the listing wizard.

Price	Who sees it	What it means
List price	The guest — it is the price on the page	What the stay costs without negotiating
Ideal	Nobody outside the platform	The host's target. An offer at or above it is accepted with no host involvement
Minimum	Nobody. Ever.	The host's floor. Only the host may sell below their target, and only by saying so themselves

The rule everything else protects: a guest must never be able to work out the minimum. If they could, every guest would offer exactly that and the margin above it would be gone. Section 6 shows how the engine makes that impossible rather than merely unlikely.

The prices are the ones for the nights being argued over

This is new since the last edition and it changes every number in the document. A listing's nightly column is what it costs on an ordinary night; weekend and seasonal rates make a particular night cost something else.

Every figure in the engine is now the figure for the dates in the offer — the price the guest is shown, the ceiling an offer is measured against, the accept line, the counter, the discount the coupon carries, and both sides' negotiation cards.

The listing used throughout — a real listing on the live site, so the numbers below are the numbers in the screenshots:

Aajoo Homes (Kharar)	Nightly column	(a weekend night)
List price	₹2,000	₹2,500
Ideal	₹1,700	₹2,300
Minimum	₹1,500	₹2,000

₹2,500 / night

These dates are priced differently - usually ₹2,000/night

Book Now

Send an Offer

Negotiate and save more

You won't be charged yet. This host approves each request — they have 1 hour to answer.

The booking rail before anything has been offered. The headline is ₹2,500 because these dates are a weekend — and it says so, rather than leaving a guest to wonder why the page disagrees with the search results. "Send an Offer — negotiate and save more" sits under "Book Now": negotiating is offered, never forced.

2. The decision, in one table

The guest offers	What happens	Is the host contacted?
Above ₹2,500 (what these nights cost)	Refused before it is sent, with that figure named	No
₹2,300 or more (at or above the ideal)	Accepted instantly, at the price they offered	Told, not asked

The guest offers	What happens	Is the host contacted?
Below ₹2,300	Answered instantly , between the ideal and the list price	No
Below ₹2,000 (under the minimum)	Answered the same way — no difference the guest can detect	No
<i>...guest accepts that answer</i>	Deal struck, discount code issued, locked to those nights	Told
<i>...guest names another price, still below the ideal</i>	Goes to the host — a popup, an email, and a push notification	Asked
<i>...guest names another price, at or above the ideal</i>	Accepted on the spot	Told
<i>...and again, and again</i>	No limit. A thread runs until somebody settles it	Only for the rounds that reach them
<i>...host declines</i>	Thread ends. Their last price stays on the table for one hour , locked to those nights, and that guest cannot open another negotiation on that listing until midnight	Their own decision
Stay starts tomorrow or later	Not negotiable — an advance booking at the listed price, reservable with 10% now	No

Three design decisions worth stating plainly, because they are the ones that earn money:

1. **The answer to round one runs down from the list price, not up from the ideal.** The worse the offer, the firmer the answer. **No automatic answer is ever worth less to the host than an instant acceptance would have been.**
2. **The host is not woken for round one.** The platform answers using the host's own published rate for those nights. Their judgement is asked for only once a guest has argued back — the point at which it adds something.
3. **A decline is not a door slammed.** It ends the argument and leaves the host's last number on the table for an hour. The host stops being interrupted; the guest still has a price they can take.

3. Scenario 1 — Below the accept line

Answered in about a second, by the platform, in the host's name. The host is not contacted at all.

Send an Offer

×

Propose your price to the host. They can accept, reject or counter.

Your offer per night (₹)

1800

≈ ₹1,800 for 1 night · listed at ₹2,500 (₹2,500 / night)

Dates you'd like to stay

CHECK-IN	CHECK-OUT
12 Sept	13 Sept

Your deal, if accepted, will be locked to these 1 night(s).

Message to host (optional)

Loved the place — would you consider this for a 3-night stay?

Send Offer

₹1,800 against a stay that costs ₹2,500 these nights. The dialog names that figure while the guest is typing, so nobody argues against the wrong number.

The answer, immediately. It thanks the guest, says plainly that the offer is under what these dates go for, names a price they can actually take, and names the next step. It never sounds automated, and it never claims the host has been asked.

Note the third line: **"Not sure yet? It will be waiting in My Negotiations."** Before this, a guest who dismissed this panel had no route back to their own offer.

4. Scenario 2 — At or above the accept line

Taken on the spot, at the price the guest named. The host is informed; nothing is asked of them.

Send an Offer

×

Propose your price to the host. They can accept, reject or counter.

Your offer per night (₹)

2400

≈ ₹2,400 for 1 night · listed at ₹2,500 (₹2,500 / night)

Dates you'd like to stay

CHECK-IN

12 Sept

CHECK-OUT

13 Sept

Your deal, if accepted, will be locked to these 1 night(s).

Message to host (optional)

Loved the place — would you consider this for a 3-night stay?

Send Offer

₹2,400 — under what the nights cost, over the host's target.

Accepted at ₹2,400 — the price the guest offered, not the ideal and not the list price. The code carries that rate into checkout.

The wording here was changed on the client's instruction. It used to read "That is at or above what the host will take." That is both the wrong tone and a leak: it tells a guest where the accept line sits relative to their own offer, which is a fact about the host's target. It now says only that the host agreed and the booking can go ahead.

Your negotiated deal is on – 4.01% off (code DEAL29291101135).
 Agreed for 12-09-2026 → 13-09-2026. The deal only applies to these dates.
 Expires in 14h 46m – book fast.

₹2,400 ~~₹2,500~~ / night
 These dates are priced differently · usually ₹2,000/night
 ☆ New listing

CHECK-IN	CHECK-OUT
12 Sept	13 Sept

Your deal is agreed for these dates, so they cannot be changed. [Book different dates without the deal](#)

Guests 2 guests

1 night (weekend rates apply)	₹2,500
Negotiated discount (-4.01%)	- ₹100
Taxes & GST (5%)	₹120

Total **₹2,520**

The host asks for a ₹5,000 security deposit, collected directly by them and not included in this total. Ask the host what it covers before you arrive.

Book Now

Send an Offer
 Already agreed for these dates

Your offer was accepted – the agreed price applies at checkout. Go ahead and book your stay. **See the conversation**

You won't be charged yet. This host approves each request – they have 1 hour to answer.

The rail updates itself: the agreed rate against the struck-through **₹2,500** these nights actually cost, the discount as a line item, tax on the discounted amount, and the total payable. It says which nights the deal covers and when it expires.

What the host is told

The screenshot shows the Aajoo host dashboard. On the left is a sidebar with navigation links: Dashboard, Properties, Bookings, Calendar, Messages, Negotiations (highlighted), Earnings, Payouts, Settlements, Statements, Performance, Offers, Boost Property, Refer & Earn, and Host Profile. The main header includes the Aajoo logo, a search bar, and user information (Hi, Sam). The main section is titled "Negotiations" with the subtitle "Review and respond to guest offers". It features four summary cards: "1 Total Offers", "0 Pending", "1 Accepted", and "0 Declined". Below these are filters: "All (1)", "Pending (0)", "Accepted (1)", and "Declined (0)". The main content area shows a negotiation with "Aajoo Renter" (Aajoo Homes). It displays the guest's offer of ₹2,400/night and the host's price of ₹2,500/night. The requested stay is from 12-09-2026 to 13-09-2026. A message from the guest is shown, and a response from the host is visible, stating "Accepted for you ₹2,400 /night" and "The host agreed to ₹2,400 a night for these dates and accepted your offer. Go ahead and complete the booking — the price is applied at checkout." A chat bubble at the bottom right says "May I help you?" with a user icon.

The host's own screen. "Guest offered ₹2,400 — Your price ₹2,500", so the offer reads as what it is: ₹100 under the asking price for those nights. The platform's acceptance is written into the thread and labelled **"Accepted for you"**, so a host can always tell which words in their own conversation are theirs.

5. Every offer has an answer under it

This is the change the client asked for most directly, and it is worth its own section.

Until 12 September an automatically accepted offer wrote the guest's message and nothing else. A renter who had negotiated six times saw six of their own offers in a column with nothing between them — a monologue, not a negotiation — even though every one of them had been accepted.

Every message now carries an answer and a label saying what became of it. "You offered ₹2,400", then "Accepted ₹2,400" in the host's name, then the button that takes the agreed price to checkout.

The labels themselves were wrong in a second way. A status describes what happened **to** a message, not what its sender did — the person who acts on an offer is always the other side from the person who sent it. At the end of a real thread a renter who had been declined by the host was reading **"You declined ₹650"** on their own screen. One shared rule now labels the guest's web screen, the host's web screen and the app.

6. Why the minimum cannot be found

This is the scenario that protects the host's floor.

A guest hunting for the minimum would look for the point where the platform's behaviour changes. **There is no such point.** Here are three offers on the same listing and the same nights — one below the ₹2,000 floor, one exactly on it, one above it. Each was sent as the opening offer of its own negotiation.

The offer, as it was typed	Which side of the floor	The answer that came back
Send an Offer Propose your price to the host. They can accept, reject or counter. Your offer per night (₹) 1990 ₹1,990 for 1 night - listed at ₹2,500 (₹2,500 / night) Dates you'd like to stay CHECK-IN 12 Sept CHECK-OUT 13 Sept Your deal, if accepted, will be locked to these 1 night(s). Message to host (optional) Loved the place — would you consider this for a 3-night stay? Send Offer	₹1,990 — under the floor	Send an Offer We can do ₹2,300/night Thank you for the offer — it sits a little under what these dates go for. We can do ₹2,300 a night. Say yes and the stay is yours; or name another price and we will take it straight to the host. Accept ₹2,300/night Counter this price Not sure yet? It will be waiting in My Negotiations. Garden view
Send an Offer Propose your price to the host. They can accept, reject or counter. Your offer per night (₹) 2000 ₹2,000 for 1 night - listed at ₹2,500 (₹2,500 / night) Dates you'd like to stay CHECK-IN 12 Sept CHECK-OUT 13 Sept Your deal, if accepted, will be locked to these 1 night(s). Message to host (optional) Loved the place — would you consider this for a 3-night stay? Send Offer	₹2,000 — exactly the floor	Send an Offer We can do ₹2,300/night Thank you for the offer — it sits a little under what these dates go for. We can do ₹2,300 a night. Say yes and the stay is yours; or name another price and we will take it straight to the host. Accept ₹2,300/night Counter this price Not sure yet? It will be waiting in My Negotiations. Garden view

The offer, as it was typed	Which side of the floor	The answer that came back
	₹2,010 — above the floor	

The three answers are the same photograph. Not similar — identical. The three PNG files in the right-hand column are byte-for-byte the same file (MD5 `21dc27ad...`), because the same pixels came back all three times.

The answer is calculated from the ideal and the list price. The minimum is not in the arithmetic at all, so no offer's answer moves when the minimum moves — and a guest lowballing twice learns nothing the first attempt did not already tell them.

The floor is not merely hidden. **There is no question a guest can ask that finds it.**

Two supporting rules hold this in place:

- **The host's "reject below" and "auto-accept above" settings were removed from the wizard**, because a reject line is only useful to a guest if the refusal quotes it — and quoting it hands out a private number. The host keeps the same power without the leak: every counter-back reaches them and they decline it themselves.
- **The offer ceiling is the only number the engine will ever quote back**, and it is the price already printed on the page.

7. Scenario 3 — A price already agreed bars another negotiation

Once a price has been agreed for particular nights there is nothing left to negotiate for those nights. The guest books, or they do not.

"Send an Offer" is greyed and says why — **"Already agreed for these dates"** — with the sentence underneath pointing at the two things a guest can actually do: book at the agreed price, or open the conversation.

Scoped to the nights, not to the listing. A guest who agreed a price for this weekend may still negotiate next weekend on the same property. The rail's own line says so: *"Your deal is agreed for these dates, so they cannot be changed. Book different dates without the deal."*

8. Scenario 4 — The guest argues back

This is the only point at which a host is interrupted.

Send an Offer

We can do ₹2,300/night

Thank you for the offer — it sits a little under what these dates go for. We can do ₹2,300 a night. Say yes and the stay is yours; or name another price and we will take it straight to the host.

Your counter, per night (₹)

Send to the host

Back

The guest names a different price. It must be below the answer they were given — a guest trying to "counter" at or above it is told to simply accept instead.

The guest is told plainly where their price has gone, that the host has been emailed as well as notified, and that Negotiations will show how long this host says they take to reply.

There is no longer a limit on the rounds. The old engine allowed three offers per guest per stay and then closed the thread, which ended arguments the host was still willing to have. A thread now runs until somebody settles it: accepted, declined, or expired.

The host's side

The screenshot shows the Aajoo host dashboard for Sam Tao. The top navigation bar includes the Aajoo logo, a search bar, a Help Center link, and a user profile icon labeled 'Hi, Sam'. The left sidebar contains a menu with options: Dashboard, Properties, Bookings, Calendar, Messages, Negotiations (highlighted), Earnings, Payouts, Settlements, Statements, Performance, Offers, Boost Property, Refer & Earn, and Host Profile. The main content area is titled 'Negotiations' with the subtitle 'Review and respond to guest offers'. It features four summary cards: '1 Total Offers', '1 Pending', '0 Accepted', and '0 Declined'. Below these are filter tabs for 'All (1)', 'Pending (1)', 'Accepted (0)', and 'Declined (0)'. The primary negotiation card shows an offer from 'Aajoo Renter' for 'Aajoo Homes' with a price of ₹1,600/night, while the host's price is ₹2,500/night. The requested stay dates are 12-09-2026 to 13-09-2026. A timeline shows a previous offer of ₹1,800/night on 09-11. A chat bubble from the guest says: 'Answered for you, at your price ₹2,300 /night. "Thank you for the offer — it sits a little under what these dates go for. We can do ₹2,300 a night. Say yes and the stay is yours; or name another price and we will take it straight to the host."' At the bottom, there are buttons for 'Accept', 'Counter', and 'Decline', with a note: 'Declining ends this negotiation. Your last counter stays open to this guest for 1 hour.'

The whole exchange in order: the guest's ₹1,800, the ₹2,300 sent on the host's behalf — labelled **"Answered for you, at your price"** so the host knows it was not their typing — and the guest's ₹1,600 now awaiting a decision. Accept, Counter and Decline, with the consequence of the third spelled out beside it: **"Declining ends this negotiation. Your last counter stays open to this guest for 1 hour."**

9. Scenario 5 — The host declines

A decline used to be a dead end: the thread closed and the guest was left with nothing, while the host's last number — one they had been willing to take moments earlier — went in the bin.

Send an Offer

This negotiation has ended

- ⓘ The host ended the negotiation, but left their last price of **₹2,300 a night** on the table for you – about **60 minutes** left. Book now to take it; after that the stay goes back to its normal price. [See the conversation](#)

You won't be charged yet. This host approves each request – they have 1 hour to answer.

The rail now prices the stay at the host's last counter, **₹2,300** — against the ₹2,500 these nights cost — with the discount as a line item and the total payable. The banner says what it is, which nights it covers, and how long is left. "Send an Offer" is greyed with "**This negotiation has ended**", and the sentence beneath it says the rest: the host's last price, the minutes remaining, and a link into the conversation.

The parting price is a personal, date-locked discount code. It is:

- **the host's own last number**, never a figure the platform invented;
- **locked to those exact nights**, so it cannot be carried to a cheaper stay;
- **valid for one hour**, counted down on the page and in the notification;
- **single use**, and it dies with the hour whether or not it is used.

The negotiation is over for the day

That guest cannot open another negotiation on that listing until midnight IST. Without this, removing the round limit left a door wide open: a decline ends a negotiation, so the very next offer would have started a fresh one with a clean count, and a guest could have re-opened the same argument a second later, for ever.

Measured in **IST days, not rolling hours** — declined at 9am and you are free again at midnight; declined at 11pm and you are free in an hour. It is a rule a person can hold in their head.

Both records

Aajoo Homes — Negotiation engine: user journey

Page 24 of 32

The host's feed for the same run: the offer answered on their behalf, the guest's counter-back, and — for the accepted case — "Offer accepted automatically". **The host is told of every outcome and asked about only the one that needs them.**

An email

The same notification, delivered to the guest's mailbox, with a button that opens the negotiation.

The test renter's mailbox during this run. Before 12 September the host-offer email selected a database column that does not exist and threw on every single offer, in silence — a host was never emailed about an offer, ever.

What is not emailed: ordinary chat messages, and payment receipts. A chat that emails every line is a chat nobody reads, and a receipt already arrives as an invoice. Everything else does.

And a guest can change it

Notifications

Choose what interrupts you — on your phone and by email. Your notifications list always keeps a record.

 This browser isn't showing notifications yet. The settings below still govern your email; turn this on to be told here too. [Turn on](#)

Deals and news on WhatsApp
Marketing messages only — booking updates are sent whatever this says

Booking confirmations, receipts, invoices and security changes are always emailed.

One switch per category, governing both interrupting channels — the phone and the mailbox. Receipts, invoices, confirmations and security changes are sent whatever these say, and the screen states that rather than showing a dead toggle.

11. Scenario 6 — An offer above what the nights cost

Send an Offer

Propose your price to the host. They can accept, reject or counter.

Your offer per night (₹)

2600

≈ ₹2,600 for 1 night · listed at ₹2,500 (₹2,500 / night)

Dates you'd like to stay

CHECK-IN	CHECK-OUT
12 Sept	13 Sept

Your deal, if accepted, will be locked to these 1 night(s).

Message to host (optional)

Loved the place — would you consider this for a 3-night stay?

These dates are ₹2,500 a night — offer less than that, or just book it.

Send Offer

There is nothing to negotiate above the price already on the page. The refusal names the figure for **these dates** — ₹2,500 — not the listing's ordinary nightly rate, and the guest is pointed at Book Now instead.

This was a real defect until 12 September. The check used the flat nightly column while the offer was judged against the dates chosen, so on a listing with weekend pricing an offer that should have been accepted on the spot came back "this stay lists at ₹2,000/night". Both clients and the server made the same mistake independently, and neither could see the other's copy of it.

12. Scenario 7 — A stay starting tomorrow

Negotiation applies to stays **starting today**. A stay starting tomorrow or later is an **advance booking**: it goes at the listed price, reservable with 10% now and the balance before check-in.

① You have a 8% deal on this stay, but it is agreed for 12-09-2026 → 13-09-2026. These dates are priced normally. Pick the agreed nights to use it.

₹2,500 / night

These dates are priced differently · usually ₹2,000/night

☆ New listing

CHECK-IN	CHECK-OUT
25 Sept	27 Sept

📅 Your deal is agreed for these dates, so they cannot be changed. [Book different dates without the deal](#)

Guests

2 guests ▾

2 nights (weekend rates apply)	₹5,000
Taxes & GST (5%)	₹250
Total	₹5,250

🔒 The host asks for a **₹5,000** security deposit, collected directly by them and not included in this total. Ask the host what it covers before you arrive.

Book Now

Advance booking — the listed price applies. Reserve it with 10% now and pay the rest before check-in.

① Price offers are only for stays starting today.

You won't be charged yet. This host approves each request — they have 1 hour to answer.

Two sentences, not one refusal: what applies instead, and why the price will not move. The offer button is not simply dead.

13. A greyed-out day says why it is grey

Reported from the live site during this rebuild:

"until I selected 12 every date was available; when I clicked 12 it greyed out 13 too."

The calendar was right — that listing asks for a minimum of two nights, so a check-in on the 12th cannot check out on the 13th. Nothing said so, and a date that disappears the moment you act reads as a bug rather than a rule.

The minimum stay and the earliest checkout, pinned to the top of the panel where they stay on screen whatever the height. The barred day also explains itself on hover, which every other kind of barred day already did.

Two layout faults were fixed with it: the two months wrapped and stacked at the panel's width, doubling its height and pushing **Done** off the bottom of the screen, and the panel was sized against the window rather than against the room below it.

14. What protects the host

Protection	How it works
The minimum never leaks	The answer is calculated from the ideal and the list price. The minimum is not in the arithmetic, so no offer's answer moves when it moves — demonstrated in section 6
No automatic answer is worth less than an acceptance	Every one sits at or above the ideal, for those nights
A lowball is never rewarded	The lower the offer, the closer to the screen price the answer comes back
The host is never interrupted needlessly	Round one is answered by the platform; only a guest who argues reaches a person
The host always knows what was done for them	Every automatic acceptance and every answer sent on their behalf is reported, and marked as automatic on their own screen

Protection	How it works
A decline actually ends it	The thread closes, and that guest cannot re-open one on that listing until midnight
...but a decline still sells the room	The host's last number stays on the table for an hour, locked to those nights
A deal cannot drift	An agreed price is locked to the exact nights it was agreed for, and expires
Nothing is sold below the target without the host	The platform never accepts a below-ideal price on the host's behalf. Only the host can

15. What changed since 9 September

	Then	Now
Rounds	Three offers per guest per stay, then the thread closed	No limit. A thread runs until it is settled
An automatic acceptance	Wrote the guest's message and no answer, so accepted offers read as a column of unanswered messages	Writes both sides, labelled "Accepted for you" on the host's screen
Message labels	By direction alone — "You declined ₹650" on the screen of the person who had been declined	By what happened to the message. One rule, three screens
A decline	Thread closed, guest left with nothing	The host's last price for one hour, locked to those nights, and the day closed to further offers
A held deal	The offer button stayed live and the server refused the form afterwards	Greyed, with the reason and what to do instead
Prices	The flat nightly column, while the offer was judged against the dates	Everything is the figure for the nights being argued over
Notifications	Sat silently in the bell, which only moved on a 60-second poll	A popup on any screen, an email, and a push — the instant it happens
Emails about offers	Selected a column that does not exist; threw on every offer, in silence	Sent, and read at the address the account actually uses
The acceptance wording	"That is at or above what the host will take"	Says the host agreed and the booking can go ahead — nothing about where the line sits

16. What we would like you to confirm

1. **The ladder** — accepted at or above the ideal; answered automatically between the ideal and the list price; a person only from round two.

2. **The one-hour parting price** after a decline, and that it is the host's own last counter rather than a figure we choose.
3. **The same-day lockout** — one decline closes that listing to that guest until midnight IST.
4. **Unlimited rounds.** The alternative is a cap, which ends arguments the host may still want to have. **We recommend leaving it uncapped.**
5. **Which notifications are emailed** — everything except ordinary chat messages and payment receipts.

Once these are confirmed we will close the module.

Every screenshot in this document was taken on www.aajoohomes.com on 12 September 2026, driving the live flow against a live listing with a real guest account and a real host account. The test records created for these photographs have been removed.
